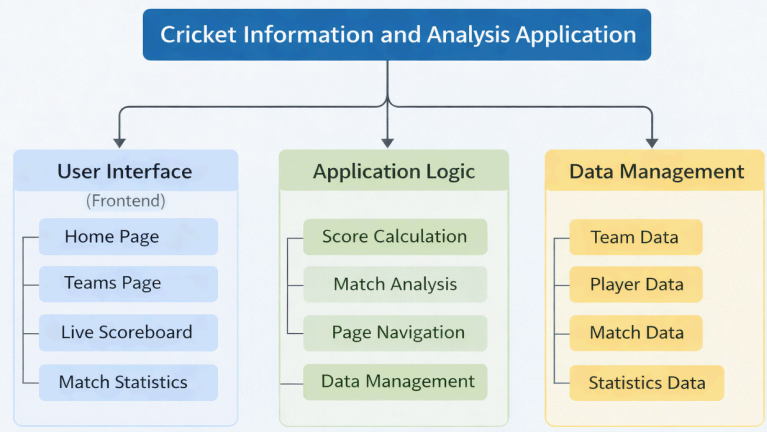
Cricket Information and Analysis System

Project Based Learning - FWD

ABSTRACT

This project develops a Cricket Information and Analysis Application that organizes important cricket data such as teams, players, tournaments, and match formats on a single web platform. The system also provides simple analytical features like player comparison and team evaluation to generate useful insights from structured cricket data.

SYSTEM ARCHITECTURE



CO-Wise Attainments

CO1 – Internet Fundamentals, HTML & Introductory CSS

- Structured web pages using HTML elements (headings, links, sections).
- Basic CSS styling for layout, colors and spacing.
- Understanding of browser and web page structure.

.

CO2 – HTML Forms, Semantic Tags & CSS Layout

- Implemented responsive layouts using Flexbox.
- Used semantic HTML elements and structured content.
- Styled UI components like cards, buttons and grids.

.

CO3 – JavaScript Programming Essentials

- Implemented JavaScript functions for cricket analysis.
- Used arrays and objects to manage team data.
- Applied conditions and calculations for match statistics..

.

CO4 – JavaScript Interactivity & DOM

- DOM manipulation to update analysis results dynamically.
- Event handling for user inputs and interactions.
- Displayed dynamic match information on the webpage.

.

CO5 – Advanced Web Development & Deployment

- Integrated external API for live cricket score.
- Implemented asynchronous data fetching using JavaScript.
- Designed SEO-friendly pages using meta tags.

CONCLUSION & FUTURE SCOPE

.

This project demonstrates essential web development concepts such as responsive design, interactive user interfaces, and dynamic data handling using HTML, CSS, and JavaScript. In the future, the system can be enhanced by integrating advanced analytics, real-time match data, player performance visualization, and additional interactive features to improve the overall user experience.
